

circuit installation.

Whenever you need to move or expand your IT infrastructure, the more information you have about your needs, timeframe and vendors the better.

Adding new network services isn't something that can happen overnight so the sooner you know that you will need to make any changes the higher your chances are that they be implemented and running by your go live date.

There is a lot of information that needs to be called on prior to a move such as account and contract information. A move is a great opportunity to get bids from additional providers to see what is best for your new location as well as your budget. Additionally, logins for all your devices will be essential for a smooth transition and they should be kept secure and confidential. Below is a checklist of these items to assist you for any IT related move or expansion.

Planning & Budgeting \rightarrow Pre-Move \rightarrow Move \rightarrow Testing \rightarrow Go Live

Your move coordinator's contact information	Will the circuit be installed in the new
Shutdown date & time and go live date & time	building's Telco room (cables extended to the
Current and new office addresses	suite) or in the Server room of your new office
Labeled floor plans for both locations	suite? Either option will require a cabling
IT company contact information for data	company.
network and voice network (if applicable)	Do you have analog lines at your current
Mover's name and contact information.	location (i.e. fax, postage machine)? If you so,
Do your movers have insurance to cover	you will need your provider's contact
moving your IT equipment?	information and account #
Contact information of new location's building	Are backups being done? When will a last
manager for any move-in related needs	backup be done prior to the move?
Cabling company contact information	How many computers and printers do you
Login and passwords for your servers, routers,	have? Will more be added after the move?
switches and Telco equipment	How many phones do you have? Will more be
DNS login and password for any changes	added after the move?
Internet and Telco provider(s) contact	Will you need any new switches, routers etc.
information, account #s and contract	to handle any additional capacity?
information. Can your current providers	Do you have the correct # licenses for any new
provide service at new location?	users?
Will you be using the same Internet and Telco	Do you have email, VPN, a website or any
providers at your new location? Will your IP	other system that is accessed externally,
addresses stay the same? If switching	which will be affected by this move?
providers, your IP address will change, so you	Are you or will you be connected to any other
will need a static IP. Allow 4-6 weeks for	offices?
